

COMPRESSANA SOCKS & STOCKINGS

For healthy &
beautiful legs

FINE SUPPORT STOCKINGS

For vitality and beauty

To stand on healthy legs and look attractive – there is no woman who does not desire that! Our modern and premium-quality full-fashioned CALYPSO hosiery is the result of an intensive product development and long lasting experience.

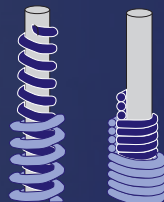

Let your leg be gently and tenderly pampered with micro soft compositions, shiny transparency and optimal fit. Feel the agreeable and stimulating effect of the COMPRESSANA CALYPSO stockings already during donning. The feeling of vitality and energy accompanies you around the clock and allows you to go unburdened through life.

At every step the appropriate hosiery

Select from soft to strong support and shiny to opaque appearance.

Your value guarantee

Our quality standard "long-life" guarantees that only the finest yarns with high quality of our own development or production are used. The careful and complex production process ensures high quality stockings with pleasant wearing comfort and beautiful mesh surface.

www.compressana.de

The correct pressure makes the difference

The effect of COMPRESSANA CALYPSO is based on the anatomically correct pressure profile along the leg. The gentle pressure (measured in mmHg) supports the veins conveying the blood pour in oxygen back to the heart and relieves the legs. The results are visibly more beautiful legs and the good feeling to do something for your health.

100%

COMPRESSANA CALYPSO is stocking fashion in three variations. Choose from soft to forte in terms of support and from ultra-soft to almost opaque in terms of appearance.

- perfectly fitting anatomical shape
- elaborate heel and toe sections
- micro-soft and skin-friendly
- high durability thanks to double-wound yarns

COMPRESSANA CALYPSO 140

Figure-shaping tights and stockings with strong support effect assist the function of the veins. COMPRESSANA CALYPSO 140 offers an attractive even and smooth mesh structure as well as the appearance and the satiny gloss of high quality full-fashioned stockings.

- elegant fine mesh structure - almost opaque
- anatomical shape and fit
- reinforced toe and heel
- high durability

Every third woman develops varicose veins during her first pregnancy. In subsequent pregnancies, as many as six out of ten women have problems with their veins. Many hope that the varicose veins will disappear again after the birth. However, significant vein dilatation often remains, which subsequently leads to the progression of varicose veins.

The most sensible and effective preventative measure for heavy, tired legs: wear COMPRESSANA support stockings or tights. This supports the leg veins from the outside and improves circulation in the legs. Even pregnancy symptoms such as nausea and dizziness can be alleviated.

Tights 70 den and 140 den with comfort body part

Asymmetric body part with anatomically optimum fit.

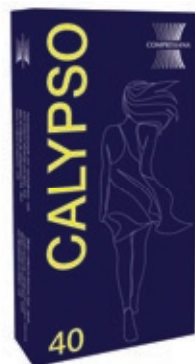

Varying mesh-sizes with stretch reserves in the body part for perfect fit in all situations.

COMPRESSANA CALYPSO 40

Transparent tights and stockings with the look of full-fashioned stockings – an excellent piece of workmanship. Sophisticated knitting and sewing technology. With mild comfortable support effect. Pleasant – all day long.

COMPRESSANA THERMO

Below-knee stocking with wool

- warming support effect against cold feet
- soft and pleasant to the skin
- merino wool plus Thermolite
- for ladies and gentlemen

A major advantage of wool is its ability to absorb moisture of up to 30% of its own weight without feeling damp. Air contained in the cavities of the fibre forms an insulating layer that, on the one hand, does not allow cold outside temperatures to reach the skin and, on the other hand, stores body heat. When using merino wool with the finest fibre density, the skin nerves are not irritated and therefore this wool is perceived as comfortable by most people. Wool also has antibacterial properties. Even after a strenuous day of wear, a high-quality wool sock still smells pleasant.

COMPRESSANA THERMO is also suitable as an understocking in extreme cold, or due to the natural blister protection of wool, e.g. when hiking or doing sports.

Thermolite: The functional fibre Thermolite is incorporated into the sole of the foot for insulation. Thanks to hollow fibre technology, Thermolite offers cosy warmth at a very low weight. The size surface and the texture of Thermolite allow best moisture transport and quick evaporation. Thermolite is ideally complemented by high-quality wool.

COMPRESSANA SPORT POWER SOCKS

Inspired by top athletes, the popularity of sports stockings with compression is also growing among recreational athletes. In many positive field reports, athletes describe less fatigue, better performance and faster regeneration. COMPRESSANA Power Socks can reduce swelling, cramps, susceptibility to injury, pain, etc.

PRONATION CONTROL SOCKS

Relieving and performance-preserving compression socks with integrated tapes for endurance sports in case of overpronation (Pes valgus)

Non-adhesive taping bands, which are welded onto the socks, stimulate the muscles and stabilise the foot three-dimensionally in the longitudinal and transverse arches, so that forces occurring under high load are better absorbed and dissipated. In various sports, foot correction using tapes plus compression can also lead to a reduction in discomfort in the shoe or boot.

COMPRESSANA SPORT

FIR-INFRA-ROTTECHNOLOGY

FOR MORE PERFORMANCE AND FASTER RECOVERY

With the new SPORT FIR product range, COMPRESSANA complements its SPORT compression socks with back seamless knits that support different parts of the body depending on the type of sport or leisure activity.

The knitted fabrics hug the body advantageously during movement and enable better air and moisture exchange thanks to the mesh-like structure.

Equipped with infrared yarn, the heat radiated from the body is reflected back into the skin tissue by the sports knitwear in the form of long-wave infrared radiation. Only far infrared (FIR) transmits energy purely in the form of heat and thus promotes well-being, regeneration and health.

Especially during exercise in sports or leisure time, where muscles and joints are subjected to greater strain, the body releases a large part of its energy back into the environment in the form of heat. In order to counteract this loss of energy and the associated cooling down, the FIR knitted fabric pleasantly conducts the heat back to the body via the skin by means of embedded, non-washable and natural minerals.

This reheating effect of the thin FIR knits, in combination with odour-inhibiting, temperature- and moisture-balancing microfibre functional yarns and a light compression effect, contributes to physical support. Ideally, an increase in performance is achieved during sporting activity and faster regeneration during rest breaks: blood circulation is noticeably increased by the warmth and in combination with compression. This benefits the muscles, joints and also the skin or the skin's appearance. In addition, the susceptibility to injuries can be reduced.

The products from the new COMPRESSANA SPORT FIR range are also breathable and ensure that the body temperature is optimally regulated, even when sweating. The functional sports and leisure wear is suitable for both high temperatures in summer and wet cold in autumn, and can also be worn underneath if required.

Conclusion: SPORT FIR promotes well-being all year round, in every season.

Rewarming seamless sports knit with infrared technology (FIR)

- + converts natural energy of the body into infrared rays
- + reflects heat in a delicate and deep way
- + energising and revitalising effect

The stitch-like structure of a knitted fabric offers clothing advantages for clothing in terms of snugness, elasticity and moisture management.

The stitches adapt optimally to the body during movement, allow better air and moisture exchange and wrinkle less.

toe

TAPE SOX are Japanese tabi socks with separate toe areas or special socks with integrated non-adhesive and skin-friendly tapes.

The skin-friendly TAPE LOOPS are attached to fabric to correct Hallux valgus and Hammer toe. COMPRESSANA TAPE SOX and LOOPS combine the benefits of conservative therapy options such as physiotherapy with kinesiotaping to counteract malpositioning of the foot or toes. They are free from side-effects. They can be used long term for problems that have functional causes. These include: bunions, flat feet, splay feet and hammer toes. The preventive, therapeutic and correctional use of tape socks can defend deterioration and subsequent complaints such as foot and joint pain or osteoarthritis in the joint of the big toe.

Preventative: The COMPRESSANA TAPE SOX and LOOPS can be worn as a precautionary measure if you have an existing or developing misalignment.

Post-operatively: After an operation for bunions or hammer toes, taping socks can help maintain a successful operation result by countering local misalignment.

The corrective socks offer relief and support for flat feet and splay feet.

Temperature and moisture regulating by X-Static Coolmax

Material composition

64% Polyester, 21% Cotton, 8% X-Static / Silver, 4% Elastane, 3% Polyamide

COMPRESSANA INTRA

Base layer and fixing system for modular wound and skin treatment

Scope of application:

- Fixation of wound dressings for the treatment of small skin injuries
- Non-slip fixation of truss pads, inlays to protect against pressure and pads for the treatment of medically and anatomically complex situations on the foot, ankle or lower leg
- In combination with flat or round knitted compression stockings, pressure truss pads and wound dressings for the modular ulcer-cruris treatment
- For patients with sensitive skin to put on underneath compression stockings and supports
- Due to high flexibility suitable for wearing in preference to socks/below-knee stockings in cases of tenderness, deformation, adhesion, large leg and foot circumferences etc.
- Toe parts (toe support or toe protection) ideal for the supporting treatment of the gaps between the toes or for the combination with compression or supporting stockings with open toe.
- To protect the foot as well as the leg against skinabrasion and chafing wearing of COMPRESSANA INTRA underneath of socks/stockings is recommended. As a result effects caused by mechanical influences e.g. blisters and sores can be avoided. In combination with Thermo-support stockings/socks or other woollen products they offer optimal protection against cold as well as protection against possible allergic reactions caused by wool products.

The X-static fibre as well as the Argentex-yarn consists of a layer of pure silver, which is firmly connected with the surface of a textile fibre. The silver is merged on the inner side of the skin-tight knitting and effects the skin directly. Due to the fineness and the special structure of the fibre COMPRESSANA INTRA feels extremely soft, smooth and more importantly extraordinarily skin-friendly.

Silver destroys a wide range of bacteria and fungus and reduces the risk of infections. Silver fibres are used for sensitive, stressed and inflamed skin and also with chronic skin diseases. Silver ions develop when the fibre gets in contact with the skin and react with the protein of the germ and thereby exhibit an antimicrobial effect. Silver reduces the odour formation. Furthermore its outstanding conductivity helps thermo regulation and reduces static.

COMPRESSANA SKIN CARE

The products were developed in close cooperation with renowned manufacturers in the field of dermatological cosmetics. Only formulations with ingredients that have been successfully tried and tested in clinics and in practice for many years are used. The products are also well tolerated by allergy sufferers, diabetics and neurodermatitis sufferers.

COMPRESSANA SKIN PROTECT

Intensive care and repair creme

Skin regeneration and acute care of stressed, sensitive areas of the skin, even in cases of venous disorders. The antimicrobial effect of silver reduces the risk of infection. The repair complex can counter inflammation, irritation, etc. and promotes skin renewal.

For regular use, especially after wearing support and compression stockings, recommended especially on irritated skin areas. Also suitable for neurodermatitis and diabetics.

Ingredients: Aqua, caprylic/capric Triglyceride, Panthenol, Glycerin, Pentylene Glycol, Polyglyceryl-3 Methylglucose Distearate, Zinc Oxide, Glyceryl Stearate, Stearyl Alcohol, Tocopherol, Silver, Citric Acid

COMPRESSANA TONIC

- **Vitalizes + strengthens the veins**
- **Refreshes + cools the legs**
- **Nourishes + moisturizes**
- **Medicinal plant extracts from horse chestnuts, sage, comfrey and witch hazel**
- **Care complex with evening primrose and apricot kernel oil**
- **Also recommended for the legs during PREGNANCY**

The tonic combines proven venous agents and sustainable care substances to create a unique and well-tolerated composition. In combination with support and compression stockings, blood circulation and microcirculation can be improved. Uncomplicated use! Can also be sprayed directly onto the stockings.

Ingredients: Aqua, Alcohol Denat, Glycerin, PEG-40 Hydrogenated Castor Oil, Sodium Lactate, Menthol, Lactic Acid, Hamamelis, Virginiana Leaf Extract, Litsea Cubeba Fruit Oil, Oenothera Biennis Oil, Prunus Armeniaca Kernel Oil, Symphytum Officinale Root Extract, Aesculus Hippocastanum Seed Extract, Camphor, Juniperus Oxycedrus Wood Oil, Linalool, Geraniol

COMPRESSANA VLIES

Practical care tissues for skin and band

Compressana VLIES is used to care for areas of skin under compression treatment – even in the area of the band – and to clean the silicone coating if necessary. The fluid contained in the care tissue protects sensitive skin from irritation, soothes itching, moisturises and removes flaky skin. Skin irritations are prevented. It also ensures a better hold and fit of support stockings and prevents slipping. Can be used before, during and after wearing support stockings.

Ingredients: Aqua, Caprylic/Capric Triglyceride, Pentylene Glycol, Laureth-9, PEG-40 Hydrogenated Castor Oil

Product	Art.No.
VLIES Care tissues in sachets, set of 10	0954

COMPRESSANA HYDRO LOTION

For improved tolerance and better grip of stockings. Also suitable for application in the area of the grip top and silicone adhesive edge, before and after wearing support stockings.

Acute care against itching and for protection against irritations. Calms and soothes sensitive skin from mechanical irritations and rubbing. Enhances the skin regeneration and provides long lasting moisturisation.

Ingredients: Aqua, Caprylic/Capric Triglyceride, Glycerin, Pentylene Glycol, Polyglyceryl-3 Methylglucose Distearate, Laureth-9, Stearyl Alcohol, Glyceryl Stearate, Zinc Oxide, Tocopherol, Citric Acid, Xanthan Gum

HYDRO LOTION Bottle 200 ml	0920
HYDRO LOTION 50 ml Airless-Spray	0951

COMPRESSANA VEIN BALM

The vein balm protects and nourishes the skin and gives a pleasant and fresh feeling before and after wearing support stockings.

Absorbs quickly and without residue. Selected natural ingredients (horse chestnut, arnica fluid extract and essential oils such as eucalyptus, camphor and rosemary) provide additional help and skin care for vein problems.

Ingredients: Aqua, Alcohol Denat., Paraffinum Liquidum, Butylene Glycol, Caprylic/Capric Triglyceride, Glycerin, Urea, Sodium Polyacryloyldimethyl Taurate, Hydrogenated Polydecene, Trideceth-10, Eucalyptus Globulus Leaf Oil, Limonene, Camphor, Alcohol, Arnica Montana Flower Extract, Aesculus Hippocastanum Extract.

Inshoe-Socks & Steps

Inshoe-Socks with wool

Inshoe-Socks with cotton

Steps with cotton

Fashionable short shaft socks. Slipped over support stockings/tights, the inshoe-socks provide for warm feet during the cold season and protect the meshes against damage caused by footwear or little stones.

- Footlets with highest wearing comfort
- Flat non-constricting elastic band at the cuff
- Particularly flexible and soft
- Breathable, not bulky
- More comfortable than barefooted in the shoe
- Protect valuable hosiery against damage in the foot part
- Create a healthy and pleasant climate in the shoe
- Can help to avoid blisters
